

Alfa Laval Installation Supervision for PureBallast

Ensuring swift and correct installation that secures performance

To perform correctly from the start, your Alfa Laval PureBallast system should be installed according to best practices as well as classification society specifications. Based on many years of experience, Alfa Laval can provide clear guidance that speeds up and safeguards the installation process. This saves money by avoiding corrections at start-up and beyond.

What we do

The main components of your PureBallast system – enhanced UV reactor(s), filter and control system – are delivered pre-assembled and tested. We provide support and guidance for integrating them with regard to piping, feedback signals and optional remote control solutions.

Benefits

- You know that your system is installed according to type approval
- You experience a faster, problem-free installation
- You minimize the risk of corrections later on
- You save time and money by avoiding errors

Scope of service

An Alfa Laval expert provides support and guidance for installing and integrating PureBallast components. Focus areas include:

- Box opening inspection
- Main component positioning
 - reactor(s), filter and control system
- Pipe layout and intersections
- Electrical cable layout
- System accessibility
- Pressurized air feed
- Documents for submission to classification society

Other 360° Service Portfolio services for your equipment

Alfa Laval offers a wide range of individual services for PureBallast. Many of these are also grouped into convenient and cost-effective service packages:

- *Annual inspection package*
This includes all services needed to verify that your system is functioning according to type approval.
